PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 1.6+ years of hands-on experience designing and automating cloud infrastructure on AWS, orchestrating containerized deployments with Docker, and streamlining CI/CD pipelines via Jenkins and Azure DevOps. Proficient in Infrastructure as Code using Terraform, source control with Git/GitHub, and enforcing code quality and security standards through SonarCloud and JFrog Xray. Passionate about engineering scalable, resilient, and secure cloud-native systems.

CORE TECHNICAL SKILLS

Operating Systems: Linux (Ubuntu, Amazon Linux)
Version Control: Git, GitHub
CI/CD Tools: Jenkins, Azure DevOps
Containerization: Docker (Dockerfile, Images, Containers, Volumes, Networking)
Infrastructure as Code: Terraform (Providers, Modules, State Management)
Cloud Platform: AWS (EC2, S3, IAM, VPC, Subnets, Security Groups, EBS, AMI, Load Balancer)
Project Management: Jira (Issue Tracking, Sprint Planning, Infrastructure Issue Resolution)

PROFESSIONAL EXPERIENCE

Naaima Embedded Technology — *DevOps Engineer* *Oct 2024 – Present*

Full-time | Telangana, India

- Resolved infrastructure issues using Terraform, managing state files and provider configurations to ensure consistent cloud environments.
- Maintained and managed Docker images, including building, tagging, and pushing to registries for multi-environment deployments.
- Supported senior DevOps engineers in CI/CD pipeline operations, assisting with pipeline troubleshooting, stage configuration, and release coordination.
- Utilized Jira for tracking and resolving infrastructure tickets, sprint planning, and cross-team collaboration on DevOps tasks.
- Monitored cloud infrastructure health and performed routine checks on AWS services including EC2, S3, and VPC.
- Coordinated with development teams to ensure smooth integration and deployment of application updates.
- Authored documentation for infrastructure configurations and deployment processes.

PROJECTS

Docker-Based Multi-Stack Application Deployment on AWS *Jan 2024 – Sep 2024*

Java • .NET • Django • Flask • Node.js

- Architected a multi-technology application ecosystem on AWS EC2 Linux servers, leveraging Docker to abstract runtime dependencies and unify deployment workflows across heterogeneous stacks.
- Constructed and maintained purpose-built Docker images and containers for each framework, ensuring environment parity across development, staging, and production.
- Crafted optimized Dockerfiles tailored to the unique build and runtime requirements of Java, .NET, Django, Flask, and Node.js services.
- Provisioned and hardened AWS EC2 instances and security groups, establishing a secure perimeter for application hosting in compliance with least-privilege access principles.
- Wired GitHub repositories into automated CI workflows, enabling continuous integration checks on every commit and reducing integration bottlenecks.

- Slashed deployment cycle time by 40% through strategic containerization, workflow automation, and elimination of manual handoff steps.
- Oversaw full application lifecycle operations, tracking service health and responding to operational events on Linux servers to maintain high availability.

EDUCATION

Aurora's PG College, Telangana — ***Master of Computer Applications (MCA)*** *2022 – 2024*

CGPA: 6.85

David Memorial Degree College, Telangana — ***Bachelor of Commerce (B.Com)*** *2018 – 2021*

CGPA: 7.76

CERTIFICATIONS

- **DevOps Engineer Certification** — Naaima Embedded Technology (Oct 2024 – Present)
