

NIKHIL MARATI

DEVOPS ENGINEER

Telangana, India | marati.nikhil97@gmail.com | +91 9912614274

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 2+ years of hands-on experience designing and automating cloud infrastructure on AWS, orchestrating containerized deployments with Docker, and streamlining CI/CD pipelines via Jenkins and Azure DevOps. Proficient in Infrastructure as Code using Terraform, source control with Git/GitHub, and enforcing code quality and security standards through SonarQube Cloud and JFrog Xray. Passionate about engineering scalable, resilient, and secure cloud-native systems.

PROFESSIONAL EXPERIENCE

DevOps Engineer, Naaima Embedded Technology

Jul 8, 2026 – Present

Client: ShopFlow — Microservices E-Commerce Platform | Telangana, India

- Designed and deployed a Dockerized microservices e-commerce platform comprising authentication, product, cart, profile, home, and order services.
- Provisioned AWS infrastructure using Terraform, including VPC, multi-AZ subnets, Internet Gateway, NAT Gateway, route tables, security groups, and EC2 Auto Scaling Groups.
- Implemented ASG + Launch Template + CloudWatch CPU-based scaling for scalable frontend and backend workloads.
- Designed public/private network architecture with configurable IGW/NAT-based backend connectivity, including private backend instances without public IPs.
- Built and managed Docker images and containers using Docker and Docker Compose, with Nginx-based frontend serving and API routing.
- Troubleshoot AWS networking, Docker, Django, MySQL, CORS, Nginx, API routing, and deployment issues across environments.
- Applied Infrastructure-as-Code and DevOps practices using Terraform, Git/GitHub, AWS, Docker, and Linux.

Junior DevOps Engineer, Naaima Embedded Technology

Oct 2024 – Jul 5, 2026

Client: Dr. Martens — E-Commerce Platform | Telangana, India

- Designed and built Docker images for 10+ microservices, enabling scalable and independent deployments across product categories.
- Developed and maintained Dockerfiles, image versioning, and registry management, integrating vulnerability assessment scans to ensure secure, consistent multi-environment deployments.
- Configured container networking and volumes to ensure seamless communication and reliable data persistence.
- Provisioned and managed scalable AWS infrastructure using Terraform (IaC), reducing configuration drift and ensuring high availability across multi-environment deployments.
- Optimized CI/CD pipeline operations using Jenkins, implementing automated build troubleshooting and release coordination, resulting in faster and more reliable deployment cycles for 10+ microservices.
- Implemented robust system monitoring for AWS infrastructure (EC2, S3, VPC), proactively identifying performance bottlenecks to maintain high availability and system performance.
- Collaborated with cross-functional teams, managed tasks via Jira, and documented deployment and infrastructure processes.
- Managed source control and versioning using Git, facilitating seamless code integration and collaboration across development teams.

Key Achievements

- Reduced deployment time by 40% by containerizing 10+ microservices using Docker on AWS EC2.
- Built and managed Docker-based microservices architecture for a production e-commerce platform, enabling scalable and independent deployments.
- Designed and provisioned AWS infrastructure using Terraform (IaC), ensuring consistent and reproducible environments.
- Established multi-environment deployment workflow (Dev/Staging/Prod) with Docker image versioning and registry management.
- Contributed to CI/CD pipelines (Jenkins/Azure DevOps), improving build stability and release efficiency.
- Created technical documentation for Docker, Terraform, and deployment processes, improving team productivity and onboarding.

EDUCATION

Master of Computer Applications (MCA) Aurora's PG College, Telangana CGPA: 6.85	2024
Bachelor of Commerce (B.Com) David Memorial Degree College, Telangana CGPA: 7.76	2021

CORE TECHNICAL SKILLS

Operating Systems: Linux (Ubuntu, Amazon Linux)
Version Control: Git, GitHub
CI/CD Tools: Jenkins, Azure DevOps, GitHub Actions
Containerization & Orchestration: Docker, Kubernetes (K8s), Helm
Infrastructure as Code: Terraform (Providers, Modules, State Management)
Cloud Platform: AWS (EC2, S3, IAM, VPC, Subnets, Security Groups, EBS, AMI, Load Balancer, EKS, ECR, Route 53)
GitOps / DevSecOps: Argo CD, SonarQube, Trivy, JFrog Xray
Monitoring: Prometheus, Grafana
Project Management: Jira (Issue Tracking, Sprint Planning, Infrastructure Issue Resolution)
Scripting: Python/Bash

PROJECTS

Nikhil's E-Commerce (Node.js + Vite) — Microservices Platform	Jan 2026 – Mar 2026
- Administered Linux-based nodes underlying the EKS cluster, provisioning cloud infrastructure (VPC, EKS, IAM, networking) using Terraform for fully automated Infrastructure as Code. - Deployed and orchestrated workloads on Kubernetes (K8s), managing services via Helm charts for templated, environment-specific deployments. - Configured mid-level network settings — Ingress and Ingress Controller — for traffic routing, load balancing, and centralized access management across microservices. - Set up proactive system monitoring and alerting with Prometheus and Grafana for real-time visibility into cluster and application health. - Implemented GitOps-based continuous delivery with Argo CD and CI pipelines (GitHub Actions) including SonarQube code-quality scans and Trivy vulnerability scanning.	
Docker-Based Multi-Stack Application Deployment on AWS	Aug 2025 – Nov 2025
- Installed, configured, and maintained AWS EC2 Linux servers and security groups to host Java, .NET, Django, Flask, and Node.js applications, applying least-privilege access principles. - Performed mid-level network configuration (security groups, subnets) and set up system monitoring to proactively identify and troubleshoot server and service issues. - Installed and configured Docker runtime and custom images across heterogeneous application stacks, unifying deployment workflows and ensuring environment parity across dev, staging, and production. - Monitored service health on Linux servers and responded to operational events to maintain high availability. - Integrated GitHub repositories into automated CI workflows, enabling continuous integration checks on every commit. - Reduced deployment cycle time by 40% through containerization, automation, and elimination of manual handoff steps.
